

Cars Community Website

Concept

The idea is to create a website for users who like to tune their cars. It would be similar to facebook, but sharing the changes they have done to their cars. One of the pages would have the most recents and another the most favorites. The user's profile page and a search engine to find an especific type of user. The users will be able to share photos and information about their cars. They will also be able to follow other users. It would be a perfect website to find inspiration on what modifications to do on their cars.

Target Audience

- 16+ years of age
- Car tuners
- Both genders
- Users with access to web

Technology

I'll be the sole developer of this project. I'll be using the FuelPHP framework and Bootstrap to develop this website for mobile users too. I'll use HTML5, CSS3, PHP and jQuery.

Timeline

I'll work really fast on the design and focus more on the code and functionality of the website. The design will be simple, not too many colors and shapes.

Budget

\$50,000 dollars.
